Multi-function Led indicator.

The only version with 12/24 Vac/Vdc

power supply and flashing light function, courtesy light function or dusk sensor function.

A new idea for improved safety:

when connected to compatible control units, Wallyght can act as a normal flashing light, or provide ambient lighting like a fixed courtesy light. When connected to a 12/24 Vac/Vdc output, Wallyght can remain permanently lit, and also be activated at dusk to then turn off at dawn thanks to the integrated dusk sensor.

Optimal efficiency, extra long life: the two 1 W-Leds guarantee a lifetime of 70.000 hours (continuous use).

Horizontal, wall or ceiling mounting: combined with the possibility of orienting the light beam and compact dimensions of the IP44 box, use of Wallyght is even more flexible.
